

# Environmental Sustainability of Fur

1. High quality food ingredients that people don't eat are \_\_\_\_\_ into nutritious feed for mink. Without fur farms, a lot of this material would end up being dumped in \_\_\_\_\_.
2. This includes left-over parts of meat products, like fish and \_\_\_\_\_, but also includes eggs, cheese, and even pastries!
3. Nutrient-rich mink manure is one of the best \_\_\_\_\_ to enrich the soil to grow vegetables for people to eat.
4. All parts of the mink are used, which means there is no \_\_\_\_\_!
5. Beautiful, durable, warm \_\_\_\_\_ is made from mink fur.
6. Fur is the original \_\_\_\_\_ used to make clothing.
7. Fur clothing can be re-styled and \_\_\_\_\_ by making into other fur items!
8. Fur is completely \_\_\_\_\_, so when you are finished with it, it simply returns to the soil!
9. Today, a lot of our clothing is made of \_\_\_\_\_. The process of making them and disposing of them creates \_\_\_\_\_ problems. Plastic is not biodegradable.
10. When plastic clothing is washed, little particles, or \_\_\_\_\_, are released and wash into the ocean. These are \_\_\_\_\_ to fish, and to the people that eat them.
11. Cotton, leather, \_\_\_\_\_ and silk are examples of other natural fabrics.
